

# MIDI REMOTE for BEHRINGER BCR2000

**INSTALL .midiremote:** import using “import script” button inside midi remote section.

**INSTALL .js:**

- Create folder structure "Behringer/BCR2000" inside "../MIDI Remote/Driver Scripts/Local" folder.
- Copy .js file inside BCR2000 folder.
- Connect your device.
- Start Cubase/Nuendo.

**IMPORTANT:** factory preset for BCR2000 is absolute mode, and this cause stutter moving on knobs: I used relative mode.

BCR2000 need to be configured manually prior to use this script:

- all knobs need to be in “rel1” mode
- all buttons “toggle off” mode

or you can load attached .bcr preset (easy done with BC MANAGER <https://mountainutilities.eu/bcmanager>).

This is the default CC assignement to match midi remote script
